

### Description

A manhole cover made of polyurethane reinforced with glass fibres, with a corresponding frame made of glass fibre-reinforced polypropylene.

### Advantages

- Watertight thanks to a double hydraulic system in the frame
- Load-bearing capacity of 400 kN in accordance with EN 124, class D400
- Anti-slip waffle pattern for optimised noise reduction
- Double siphoning system
- Four-point locking system

### Characteristics

| Characteristic  | Value                                   | Characteristic                | Value       |
|-----------------|-----------------------------------------|-------------------------------|-------------|
| Article code    | <u>13389</u>                            | Certificate                   | Uncertified |
| Commercial Code | HE700RD                                 | Load class                    | D400        |
| Raw material    | Polyurethane reinforced with fibreglass | Outer diameter Ø (mm)         | 780         |
| Shape           | Round                                   | Clear opening diameter Ø (mm) | 610         |
| Lid properties  | Watertight                              | Height (mm)                   | 120         |
