

IT Plus Variobox infiltration crate

Description

Infiltration crate manufactured from thermoplastic material, consisting of a fully open plastic structure that can be assembled modularly, both horizontally and vertically, into a stable underground structure (basin) for the temporary storage and/or infiltration of water into the soil.

- The IT Plus Variobox is manufactured from PP (polypropylene).
- The IT Plus Variobox system is 100% compatible with the IT Plus Controlbox and the IT Plus Vivo Control, offering numerous configuration options for maintenance and inspection.

Advantages

- Three-dimensional water-permeable structure
- Extremely high load-bearing capacity with very low installation height
- Connection and linking options on all sides
- Storage capacity: 95%
- Permeability coefficient: > 63%
- 100% recyclable

Application

The IT Plus Variobox is specifically designed for use in large-scale applications. The system forms part of a sustainable water management solution and is intended for the storage, conveyance and infiltration of rainwater, whether originating from roofs, roads, car parks or any other paved surface.

IT Plus Variobox infiltration crate

Characteristics

Characteristic	Value	Characteristic	Value
Raw material	PP	Inspectable	No
Colour	Black	Connection options	110, 125, 160, 200, 315, 400, 500

Variants

Article code	Commercial Code	Gross volume (L)	Net volume (L)	Width (mm)	Length (mm)	Height (mm)	Weight (kg)
