

Inspectable Variobox infiltration crate

Description

Inspectable infiltration crate manufactured from thermoplastic material, consisting of a fully open plastic structure that can be assembled modularly, both horizontally and vertically, into a stable underground structure (basin) for the temporary storage and/or infiltration of water into the soil. Equipped with an inspectable flow-through channel Ø175 mm.

- The IT Plus Variobox Inspect is manufactured from PP (polypropylene).
- The IT Plus Variobox Inspect system is 100% compatible with the IT Plus Controlbox and the IT Plus Vivo Control, offering numerous configuration options for maintenance and inspection.

Advantages

- Three-dimensional water-permeable structure
- Extremely high load-bearing capacity at very low installation depth
- Connection and linking options on all sides
- Storage capacity: 95%
- Permeability coefficient: > 63%
- 100% recyclable

Application

The IT Plus Variobox Inspect is specifically designed for use in large-scale applications. The system forms part of a sustainable water management solution and is intended for the storage, conveyance and infiltration of rainwater, whether originating from roofs, roads, car parks or any other paved surface.

Inspectable Variobox infiltration crate

Characteristics

Characteristic	Value	Characteristic	Value
Raw material	PP	Inspectable	Yes
Colour	Black	Connection options	110, 125, 160, 200, 315, 400, 500

Variants

Article code	Commercial Code	Gross volume (L)	Net volume (L)	Width (mm)	Length (mm)	Height (mm)	Weight (kg)
17546	VARIOBOX40A	144	137	600	600	400	7,20
13954	VARIOBOX60A	216	205	600	600	600	10,80
