

IT PLUS VARIOBOX HEAVY 600X600X600MM SLW60

Description

Infiltration crate manufactured from thermoplastic material, consisting of a fully open plastic structure that can be assembled modularly—both horizontally and vertically—into a stable underground structure (basin) for the buffering and/or infiltration of water into the soil.

- The IT Plus Variobox is made of PP (polypropylene).
- The IT Plus Variobox system is 100% compatible with the IT Plus Controlbox and the IT Plus Vivo Control, offering numerous options for maintenance and inspection.

Advantages

- Three-dimensional water permeability
- Connection and linking possibilities on all sides
- Storage capacity: 95%
- Permeability coefficient > 63%
- 100% recyclable

Application

The IT Plus Variobox is specifically designed for use in large-scale, engineered applications. The system forms part of a sustainable water management solution and is intended for the storage, conveyance and infiltration of rainwater, whether originating from roofs, roads, car parks or any other paved surface.

IT PLUS VARIOBOX HEAVY 600X600X600MM SLW60**Characteristics**

Characteristic	Value	Characteristic	Value
Article code	<u>26950</u>	Gross volume (L)	216
Commercial Code	VARIOBOX60H	Net volume (L)	205
Raw material	PP	Inspectable	No
Width (mm)	600	Connection options	110, 125, 160, 200, 315, 400, 500
Length (mm)	600	Weight (kg)	10,80
Height (mm)	600
