

Supervap Premium vapour barrier 2 x 50m

Description

Vapour control foil made from LDPE that effectively prevents the transfer of water vapour from the interior of the building to the thermal insulation. The material is characterised by increased resistance to adverse weather conditions such as snow, rain and dust.

Advantages

- Vapour barrier
- Tear-resistant
- Quick and easy installation
- UV-resistant

Application

The Supervap Premium vapour barrier is primarily used as an insulating layer that controls vapour levels in wall, floor, roof and ceiling constructions. The product is also recommended for use as insulation and acoustic protection in floor finishes, such as under floor panels.

Supervap Premium vapour barrier 2 x 50m

Characteristics

Characteristic	Value
Raw material	LDPE
Colour	Blue
Length (m)	50
Width (m)	2
EU fireclass	E
Temperature resistance	-40 +80° C
SD value (m)	>100
UV resistance (months)	2
UV exposure time (weeks)	4
Tensile strength longitudinal (MPa)	min. 8
Tensile strength transverse (MPa)	min. 6
Elongation at break MD (%)	min. 150
Elongation at break CD (%)	min. 150
Tear resistance MD (N)	min. 40
Tear resistance CD (N)	min. 40
